

AASC's New Website Launch

Applied Aerospace Structures Corp. (AASC) is pleased to announce the launch of its new website. The new website was developed to help keep customers better informed of the constantly diverging capabilities offered by AASC and provide better customer service. Apart from a new design and layout, the website also offers a Customer Secure Portal. The Portal will allow our program managers to keep up-to-date program specific information easily accessible to customers in a password protected site.

AASC is a small business located in Stockton California and has been designing and fabricating critical lightweight, high performance, engineered structures for the aerospace industry for nearly 50 years.

The website can be accessed at <http://www.aascworld.com>. The following is a copy of the site map that can be accessed on the website.

The screenshot shows the AASC website interface. At the top, there is a navigation bar with links for 'About AASC', 'News', 'Careers', 'Site Map', 'Login', and 'Contact Us'. The main header features the AASC logo and the tagline 'Specializing in Lightweight Structures for the Aerospace Industry'. A search bar is located on the right side of the header. Below the header is a large image of a person working inside a large, curved, metallic structure. Underneath the image are four navigation tabs: 'HOME', 'SPACE', 'AIR', and 'GROUND'. The 'Site Map' section is displayed below the tabs, organized into four columns: 'SPACE', 'AIR', 'GROUND', and 'AASC INFO'. Each column contains a list of product categories and services. At the bottom of the page, there is a footer with copyright information and website design credits.
